

Regenerative Ocean Farming

RESTORING LIFE FOR THE HEALTH OF THE OCEAN

At PEM we envision a thriving community and a healthy kelp forest ecosystem, thanks to sustainable development alternatives that prioritize the well-being of local communities and the sea.

Our goal within this project is to *promote* regenerative economic, social, and environmental well-being by pushing public policies that ensure kelp forest *conservation*, regulate macroalgae extraction and together with strategic partners lay the foundations for the implementation of *regenerative* ocean farming models.
